

Some general information about us:

- we have been working in this area for about 10 years
- we carry out about 900 -1000 egg donation cycles per year
- our success rate is about 75%
- we are ISO certified
- we have no age limit, only the health limit
- we carefully screen all of our donors according to the highest European standards
- 70 % of our donors hold college degree

Every package covers:

- medical treatment (we're working according to the leading treatment plans, proved being efficient, and that allows us not to have an age limit for egg donation programs)
- egg donor fee (our donor base contains more than 500 young and attractive women with proven fertility (every donor has at least one healthy child of her own))
- medications
- service of the coordinator in charge of the program
- accommodation
- meals
- transportation

PERFECT CHANCE Package (mitochondrial donation program) includes the following services:

EUR 14,900

- 2 equal installments (7,450 euros after signing a contract and 7,450 euros at the day of egg retrieval);
- 5 embryo transfers;
 - 2 cycles of mitochondrial donation;
 - 3 cycles of egg donation;
 - medical treatment (we're working according to the leading treatment plans, proved being efficient, which that allows us not to have an age limit for egg donation programs);
 - medications needed before transfer and 3 months after;
 - egg donor fee (our donor base contains more than 500 young and attractive women with proven fertility, meaning that every donor has at least one healthy child of her own);
 - sperm donor (if needed)
 - pregnancy monitoring till 12th week

- embryo reduction (if needed)
- the cost of selective reduction is covered by the package price;
- services of the coordinator in charge of the program;
- accommodation;
- meals;
- transfer from/to the airport and from/to the clinic

PERFECT CHANCE Package DOESN'T include the following services:

- TESA, TESE (in case TESA, TESE is needed you will be charged 1,000 euro additionally).

STAGES OF EACH PROGRAM:

1. Picking a date for initial consultation and sending the list of required documents:

- a) transvaginal ultrasound check results
- b) breast ultrasound check results (if you're younger than 50 and never had any breast problems) or mammography results (if you're over 50 or had any breast problems in the past)
- c) chest X-Ray (for both you and your husband/partner) – if you have never had any problems with lungs, it can be omitted
- d) doctor's certificate that you're healthy enough to carry out a baby and there are no contraindications for pregnancy and hormonal stimulation
- e) passports
- f) sperm count (if available)

Additional documents for mitochondrial donation:

- f) hormonal panel: AMH, FSH, LH. If FSH level is more than >16, only egg donation program can be offered.

All other tests will be conducted in our clinic.

2. Initial consultation:

You and your husband/partner come to the clinic to undergo the required tests (blood tests for both, pap smear, sperm count), the doctor studies medical records, performs transvaginal ultrasound check and evaluates your chances to successfully accomplish the program and makes the decision whether the program can be performed and authorizes the number of attempts. If both, the fertility specialist and the embryologist authorizes the program we are allowed to sign the agreements and you can make the first payment. You may pay either in cash or by credit card. We accept EUR or USD. The doctor explains you the treatment plan and we give you the

medications needed for your subsequent stimulation protocol. You have to follow the doctor's instructions very strictly. Initial consultation takes 1 full day.

3. Treatment:

You're following the treatment plan and make the ultrasound testing according to the protocol of stimulation and synchronization. When the date of your second visit is defined, you need to come to Kiev for the embryo transfer. Please be ready to spend up to 7-10 days here.

4. Waiting for results

After the embryo transfer, you will be given the protocol to follow and medications according to that protocol. Those medications are intended to increase the chances to achieve and successfully support pregnancy. In 2 weeks after the embryo transfer you need to have HCG blood test and send us the result. Our obligations are considered to be fulfilled after pregnancy reaches the term of 12 weeks.
